Dear Mr. Klein,

We formally invite the Commission on Accreditation of Medical Physics Education Programs (CAMPEP) to visit and review the University of Minnesota Radiation Oncology Physics Residency Program. Attached you will find the self-study prepared by Dr. Bruce J. Gerbi, the Program Director.

We applaud your efforts to set standards for quality training in medical physics programs and are willing to assist you in whatever you need to review the University of Minnesota Physics Residency Program. Please let us know if we can help in any way.

Sincerely,

Kathryn Dusenbery, MD
Department Head

Minneapolis, MN 55455

Dear Dr. Gerbi,

The Administrative and Educational Leadership in the Radiology Department and the Division of Radiation Oncology at Scott & White Clinic supports this application for accreditation of our Radiation Oncology Physics Residency. Since its inception we have encouraged its existence and excellence.
The Administrative and Educational Leadership in the Radiology Department and the Division of Radiation Oncology at Scott & White Clinic supports this application for accreditation of our Radiation Oncology Physics Residency. Since its inception we have encouraged its existence and excellence.

We feel this program compliments our education mission and we are highly desirous that it achieve the designation “Accredited by CAMPEP, Inc” as an assurance that the program has achieved the level of excellence we strive for.

Sincerely,

Gil Naul, M.D.

Clinical Rotation Summary (University of Minnesota Medical Physics Residency Training Program)

Clinical Rotation Schedule and Objectives

Rotation 1  Chief Mentor: B. Gerbi

Orientation
Machine QA: monthly mechanical checks, calibration
Brachytherapy: GYN loading/unloading, HDR QA
Rotations: Nursing, Linacs, Simulator, Radiation Protection
MU calculation problem set
Chart checking
Special procedures: TBI

1. The resident shall:
   a. Meet with the program director to discuss program objectives
   b. Meet to discuss Rotation 1 Objectives (Attachment R.1.A)
   c. Attend the department orientation course

1. Cover the Quality Management Program (QMP)
2. Cover Monitor Unit Calculation (Attachment R.1.B)
3. Cover Brachytherapy LDR Loading/unloading and control of radioactive material
4. Cover other items on Attachment R.1.A
2. Attend hospital orientation
First Rotation Objectives (Attachment R.1.A)

(from Boyer self-study)
Rotation 1; 6 Months – Task List for Radiation Oncology Physics Residents
Orientation, Rotation in Patient Simulation, Patient Virtual Simulation, Simulator and CT Quality Assurance, Device Fabrication, 3-D Treatment Planning and In-Vivo Dosimetry Measurements
Mentors: Betty Achino, CMD; Albert Zacarias, Ph.D.

Overview:
Clinical training will be under the direction of the Assistant Director of the Radiation Oncology Physics Residency Program. The training and supervision of clinical physics activities will be by the faculty and professional staff of the Physics Section of the Radiation Oncology Department. The training in dosimetry procedures will be by the Dosimetry Section of the Department of Radiation Oncology, University of Louisville Hospital. All patient care activities will be checked and signed by either a Certified Medical Dosimetrist or a Certified Medical Physicist, as appropriate. The resident’s progress will be reviewed by the Radiation Oncology Physics Residency Program Director quarterly.

Learning Objectives:
1. Learn simulation and virtual simulation procedures, including patient positioning, immobilization and localization. CT virtual simulation will include tumor localization, patient contours and virtual radiographic/fluoroscopic positioning of beams. Beams will be modified with custom blocking/MLC shaping. The resident will develop a simulation skill level acceptable to the faculty radiation oncologists and the rotation supervisors.
2. Learn simulator and CT-simulator quality assurance.
3. Learn computer-assisted isodose generation techniques and external beam treatment planning procedures with a 3-D treatment planning system.
4. Learn and perform Monitor Unit calculations, including: SSD/PDD, SAD/TAR/TMR/TPR, extended SSD for photons and electrons, off-axis points, heterogeneity (inhomogeneity) corrections, tissue compensation, asymmetric collimation, Sc & Sp, and enhanced dynamic/virtual wedge calculations.
5. Learn treatment plan verification, treatment record verification, Monitor Unit calculation/verification, image based (ultrasound/EPID) patient positioning, tissue compensation, information systems data entry and integrity, record and verify systems, fetal dose and pacemaker considerations.
During the six-month rotation, the radiation oncology physics resident should complete the following tasks:

1. Complete all training modules within the Stanford Dosimetry Training Tool.
2. Observe and participate in patient simulations for six months.
3. Observe and participate in patient virtual simulations for six months.
4. Perform simulator, and CT Quality Assurance for six months according to the following
   b. Perform Monthly Quality Assurance checks for simulator and CT-simulator.
5. Fabricate custom Cerrobend treatment devices for one month.
   a. Fabricate custom cast and mold work for six months.
6. Plan one or more of the following external beam case types with the 3-D treatment planning system:
   Plans may be coplanar or non-coplanar (3D). These plans will utilize CT, MRI, PET, Ultrasound
   and fusion/registration imaging techniques:
   a. Breast
   b. Central nervous system (CNS) - Simple cranium
   c. Genitourinary (GU) - Prostate / Multiple and Conformal Fields
   d. Gynecological/Cervix (GYN)
   e. Gastrointestinal (GI) – Esophagus, Colon / Rectum
   f. Head and Neck (plan at least one maxillary antrum from file)
   g. Lymphoma
   h. Melanoma
   i. Pediatrics
   j. Sarcoma
   k. Thoracic (Lung with off cord)
7. Plan one of the following irregular field case types with the 3-D treatment planning system:
   a. Circle new mouth head case.
7 Plan one of the following irregular field case types with the 3-D treatment planning system:
   a. Clarkson mantle by hand
   b. Clarkson mantle by 3-D treatment planning system
8 Assist in performing an annual calibration (using TG-51) on at least one linear accelerator. Record the
   results in Argus.
9 Observe and participate in patient simulations for six months.
10 Observe and participate in patient virtual simulations for six months.
11 Perform Annual Calibration on a simulator and a CT-simulator.
12 Perform all procedures to commission and the following dosimetry systems.
   a. Patient diode dosimetry
   b. Thermoluminescent dosimetry
   c. Film dosimetry system
13 Assist in performing an annual calibration (using TG-51) on at least one linear accelerator. Record the
   results in Argus.
14 Complete all modules within the Stanford Dosimetry Training Tool.

The Rotation Mentor will train and evaluate resident performance for QA checks and construction of devices.
The radiation oncologist must approve all plans for patient use.

Readings:
1  Stanford Dosimetry Tool – all sections.
2  ICRU Report 50 Prescribing, Recording and Reporting Photon Beam Therapy (1993)
3  ICRU Report 62 Prescribing, Recording and Reporting Photon Beam Therapy (Supplement to 50)

Clinical Medical Physics Residency/Fellowship
Mayo Clinic, Division of Radiation Oncology

The Department of Radiation Oncology at Mayo Clinic, Rochester, MN invites applications for residency and fellowship positions in clinical medical physics. Apply your experimental skills making a positive difference in a high technology clinical environment. Individuals will receive training in all essential aspects of clinical radiation oncology physics in our CAMPEP accredited Medical Physics Residency Program. The three year fellowship and two year residency commence in July 2007. The fellowship position also includes clinical research effort involving digital imaging, treatment planning and treatment optimization in radiation oncology. Qualified individuals should possess a recent Ph.D. in medical physics or experimental physics and have demonstrated ability to manage all aspects of an experimental research project, including data acquisition and analysis, software development and documentation. Excellent communication skills and the desire to interact with patients and other healthcare professionals is essential. The successful candidates will join a Physics Section of 7 Ph.D. faculty, 11 clinical physicists, 4 residents/fellows and computer support personnel. The Physics Section supports all aspects of the Mayo Rochester clinical radiation oncology program, research and graduate education. Please see http://www.mayo.edu/msgme/radoncology-programs.html for more information and

Attachment 4B: Scott & White Medical Physics Residency Program Web-Site

Medical Physics Residency Program

The Scott & White Medical Physics Residency program was founded to produce well-rounded medical physicists specially trained to provide technical support for comprehensive management of cancer.

Apply Now

Through our rotation-based regimen of Socratic learning experiences, Scott & White Medical Physics residents incorporate lifelong learning into their practice of medical physics, delivering the highest quality care to the support that radiation oncologists and the staff of a radiation oncology department needs to provide the highest standards of cancer management.
Medical Physics Residency Program

The Scott & White Medical Physics Residency program was founded to produce well-rounded medical physicists specially trained to provide technical support for comprehensive management of cancer.

Apply Now

Through our rotation-based regimen of Socratic learning experiences, Scott & White Medical Physics residents incorporate lifelong learning into their practice of medical physics, delivering the highest quality care to the support that radiation oncologists and the staff of a radiation oncology department needs to provide the highest standards of cancer management.

Applying to the Program

The Medical Physics Residency program applicants must demonstrate a strong foundation in basic physics. This shall be documented by a master's or doctoral degree in medical physics, physics, engineering, mathematics or other science with physics training equivalent to a minor in physics (upper level courses in electricity and magnetism, quantum mechanics, atomic structure, statistical mechanics and mechanics).

Recruiting will begin in the first calendar quarter. Following a response, the program director will contact applicants and discuss the program, their interests and what information they might need. Subsequent to this conversation, the resident applicant will receive the following:

RANK

Clinical Medical Physics Residency Candidate Evaluation Form

Name of Candidate: KOVALCHUK, Nataliya

Date of Interview: February 5, 2008

Scores:

- Interest, reasons for candidacy for this residency
- Knowledge of Radiation Oncology Medical Physics
- Technical skill set including experimental experience
- Application (references, transcripts, etc.)
- Communication and interaction skills
- Initiative and Productivity

Scale:
1 = outstanding
2 = excellent
3 = good
4 = satisfactory
5 = unacceptable

Overall Score: (does NOT have to be your average score)
